80.5

The present sequence represents a Mycobacterium tuberculosis protein. Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosis of or vaccination against tuberculosis caused by M. tuberculosis, M.

africanum

or M

bovis

New isolated mycobacteria polypeptides and nucleic acids - developing products for the diagnosis of or vaccination aga mycobacterial infections, particularly tuberculosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ž Š
                  The invention describes a substantially pure immunogenic polypeptide fragment (I) from Mycobacterium tuberculosis that is able to evoke a protective immune response against infections by mycobacteria belonging to the tuberculosis complex. The invention provides a (I) fusion polypeptide comprising at least one polypeptide fragment (I) and at least one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell epitope from M. tuberculosis protein ESAT-6, or MPT59 and a second different amino acid sequence from M. tuberculosis and/or including a sequence which protects the first amino acid sequence from in vivo degradation or post-translational processing; (3) a nucleic acid fragment that encodes the above polypeptides. The polypeptides and nucleic acid are useful as pharmaceuticals, for diagnosis of and as antigens for vaccination against TB caused by Mycobacterium tuberculosis, africanum or bovis. The polypeptides are also sensitization in an animal with bacteria belonging to the tuberculosis complex. The invention also describes the use of CPP7A or CPP3OA or a T-cell epitope of for the induction of a strong immune.

                                                  The present sequence is that of the Mycobacterium tuberculosis MTBN2 protein. This is 1 of 8 proteins, i.e. MTBN1-8 (see AAB1982-49), encoded by 8 open reading frames (see AAB9035-42) identified as being present in the genome of M. tuberculosis but absent from the genome of the BCG strain of Mycobacterium boyis. MTBN1-8 represent reagents that are useful in discriminating between M. tuberculosis and BCG and, in particular, for disgnostic methods which discriminate between exposure of a subject to M. tuberculosis and vaccination with BCG. The invention features these MTBN polypeptides, functional fragments of them, DNA encoding them, vectors, transformed cells, and disgnostic, therapeutic, and prophylactic (vaccine) methods, including genetic vaccination methods

                                                                                                                    The invention relates to a novel diagnostic reagent comprising a peptide epitope from a protein encoded by the RD1 or RD2 regions of the Mycobacterium tuberculosis, M. bovis or M. africanum genome. The diagnostic reagents comprised within the kit are selected so that they are able to differentiate between M. bovis, M. tuberculosis or M. africanum-infected mammals and mammals vaccinated against M. bovis, M. tuberculosis or M. africanum. The polypeptide or its variant or fragment is useful as a medicament provided that the polypeptide is not a MPT-64 polypeptide or a polypeptide encoded by the Rv1984c region of the M. bovis, M. tuberculosis or M. africanum genomes. The nucleic acid which encodes the polypeptide or the diagnostic reagents can be used as a vaccine, especially against Mycobacterium infections. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antibacterial; antitubercular; tuberculostatic; vaccine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           뭉
                              tuberculosis and in preparing a vaccine against tuberculosis caused by convirulent mycobacteria. The vaccine or immunogenic/pharmaceutical composition can be used prophylactically in a subject not infected with a convirulent mycobacterium, or therapeutically in a subject already infected with a virulent mycobacterium. The protein is useful for preventing, converting and detecting infections caused by species of tuberculosis complex (M. tuberculosis, M. bovis, M. africanum). The nucleic acids may be used for effecting in vivo expression of the antigen, and in configuration assays for detecting the presence of pathogenic organisms in a sample. The vaccine is an improvement of the living BCG vaccine presently cavailable, where one or more copies of the DNA sequence encoding one or more polypeptide has been incorporated into the genome of the microorganism to allow the microorganism to express and secrete the collapseptide. Incorporation of more than one copy of a nucleotide sequence enhances the immune response. The present sequence represents an M.
                                                                                                                                                                                                                                                                                                                                               The invention relates to a substantially pure polypeptide comprising an amino acid sequence selected from Rv0284, Rv0285, Rv0455c, Rv0569, Rv1195, Rv1386, Rv3477, Rv3878, Rv3879c or Mr3106.1 (also disclosed are ORF13A and Rv0284ct), or their immunogenic portion, nucleic acids encoding them and an amino acid sequence analogue having at least 70% sequence identity to the polypeptide and is immunogenic. The protein is useful in preparing a pharmaceutical composition for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Mycobacterium tuberculosis antigens, useful for diagnosing tuberculosis, and as a vaccine for treating or preventing infections caused by species of tuberculosis complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tuberculosis; Tuberculostatic; antibacterial; vaccine; Rv0284; Rv0285; Rv0455c; Rv0569; Rv1195; Rv1386; Rv3477; Rv3878; Rv3879; MT3106.1; ORF13A; Rv0284ct; Mycobacterium bovis; Mycobacterium africanum;

AEB26458
cc pharmaceutical composition comprising a fusion polypeptide having contrigens from Bacillus Calmette Guerrin (BCG) administered to a person congrising a fusion polypeptide having conjugation with BCG or to a person who has previously been vaccinated with CC BCG. Also described are: (1) an immunogenic composition, vaccine or CC pharmaceutical composition comprising a fusion polypeptide which CC comprises two or more immunogenic polypeptide, or its analogue, selected from Ag85A, Ag85B TB10.4, ORP2C, Rv0285, Rv0287 and Rv1036G, or CC comprises amino acid sequences encoding the fusion polypeptides selected CC from Ag85A, TB10.4, Ag85B-TB10.4-Ag85A, Ag85B-TB10.4-Ag85A, Ag85B-TB10.4-Ag85A, Ag85B-TB10.4-Ag85A, Ag85B-TB10.4-Ag85A, TB10.4-Rv1036, Ag85B-TB10.4-Ag85A, TB10.4-Rv1036-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag85A, TB10.4-Ag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

immunogenicity; vaccine; pharmaceutical; fusi
Ag85A; mycobacterium tuberculosis infection;

pharmaceutical composition comprising a fusion polypeptide having antigens from Bacillus Calmette Guerrin (BCG) administered to a person together with BCG or to a person who has previously been vaccinated wit BCG. Also described are: (1) an immunogenic composition, vaccine or pharmaceutical composition comprising a fusion polypeptide which comprises two or more immunogenic polypeptide, or its analogue, selecte from Ag85A, Ag85B, TB10.4, ORF2C, RV0285, RV0287 and RV1036C, or comprises amino acid sequences encoding the fusion polypeptides selecte from Ag85B-TB10.4, Ag85B-TB10.4-Ag85B-TB10.4-Ag85B-TB10.4-Ag85B-TB10.4-Ag85B-TB10.4-Ag85B-TB10.4-Ag85B-TB10.4-Ag85B-TB10.4-Ag85B-TB10.4-RV1036, Ag85B-TB10.4-Ag85B-TB10.4-Ag85B-TB10.4-RV1036-Ag85A, TB10.4-RV1036-Ag85B-TB10.4-Ag85B-TB10.4-Ag85B-TB10.4-Ag85B-TB10.4-RV1036-Ag85B-TB10.4-Ag8

The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational contents of the compound that inhibits to the contents of the strains of screening for homologous nucleic acids are useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC identifying adhesin and adhesin-like proteins, by computing the sequence computed stributes of protein sequences using five attribute modules of a coneural network software, training an artificial neural network (ANN) for cach of the computed five attributes, and identifying the adhesin and conditions of the computed five attributes, and identifying the adhesin and conditions of a condition adhesin lake proteins having probability of being an adhesin (Pad) as conditing adhesin and adhesin-like proteins, having 274 fully defined 162-conditing adhesin and adhesin-like proteins, having 274 fully defined 162-conditions and adhesin-like proteins, having 105 fully conditions as conditions and adhesin-like proteins, having 105 fully conditions and adhesin-like proteins, having 105 fully defined 306-1876 base pair (SEQ ID NO: 12-79); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-291 base pair (SEQ ID NO: 12-79); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully connected multilayer feed forward ANN (I) based on (M1). (M1) is useful for identifying adhesin and adhesin-like proteins, of therapeutic potential, and identifying and short-listing consists. (M1) is useful for identifying and short-listing consists to eliminate diseases caused by various pathogenic organisms. (M1) is consisted to identifying putative adhesins that are important in drug discovery and preventing therapeutics for whooping cough, pneumonia, consisting the proteins, and from bacteria belonging to a wide consistency adhesin shate are adhesine from consisting adhesive nature of unique proteins. The present sequence is a microbial pathogen adhesin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid; (2) a host cell containing the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (3) an isolated converse of the vector; (4) an antibody capable of specifically binding converse of the polypeptide; (6) inhibitied by the converse of the polypeptide; (6) inhibitied by the converse of the polypeptide; (6) inhibitied cellular converse of the polypeptide; (6) inhibitied cellular converse of the polypeptide; (6) inhibitied cellular converse of the polypeptide; (6) inhibitied cellular converse of the proliferation of the polypeptide; (6) inhibitied cellular converse of the proliferation of the polypeptide; (6) inhibitied cellular converse of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation of the proliferation, but was obtained the proliferation of the proliferation, but was obtained the proliferation of the proliferati

                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel method for the early detection of mycobacterial disease or infection in a subject. The method comprises assaying a biological fluid sample from a subject having symptoms of active tuberculosis for the presence of early antibodies specific for one or more early Mycobacterium tuberculosis antigens. The invention further relates to: a kit for early detection of M. tuberculosis disease, and an antigenic composition for early detection of the M. tuberculosis disease or infection. The compositions of the invention have antibacterial activity. The method is useful for early detection of mycobacterial disease or infection in a subject and for preparing a vaccine against M. tuberculosis infection. This sequence represents the protein derived from the gene Rv3367 relating to the mycobacterial disease or infection method of the invention.
   Mycobacterium tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Barly detection of mycobacterial infection in a subject by assaying a biological fluid sample from a subject having symptoms of active tuberculosis for the presence of early antibodies for early Mycobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           21-JUN-2001; 2001WO-US020545

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression to the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid comprising a promoter operably linked to the nucleic acid complete acid; (2) a host cell containing the vector; (3) an isolated complete acid; (2) a host cell containing the vector; (3) an isolated complete acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the complete acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the complete activity of a gene in an operon required for complete activity of a gene in an operon required for complete activity of a gene in an operon required for complete activity of the gene product or that that inhibite cellular proliferation; (8) identifying a compound that inhibits proliferation; (8) compound's activity; (11) a culture comprising strains in which the gene compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits are useful for proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation in cells other than S. aureus, S. typhimurium, C. and discovery programs, or for screening homologous nucleic acids are useful for cequired for proliferation in cells other than S. aureus, S. typhimurium, C. and compound that inhibits is cellular proliferation of a compound that inhibits are nucleic acids are u

RESULT 13
AEB91453
cc identifying adhesin and adhesin-like proteins, by computing the sequence computed network software, training an artificial neural network (ANN) for ceach of the computed five attributes, and identifying the adhesin and cc each of the computed five attributes, and identifying the adhesin and cc each of the computed five attributes, and identifying the adhesin and cc equal or greater than 0.51. Also claimed is a set of 274 annotated genes cc encoding adhesin and adhesin-like proteins, having 274 fully defined 162-cc 11151 base pair (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical cc genes encoding adhesin and adhesin-like proteins, having 274 fully defined 51-1876 base pairs (SEQ ID NO: 659-763); a set of 279 annotated cc adhesin and adhesin-like proteins, having 279 fully defined 53-3716 base cair (SEQ ID NO: 1-279); a set of 279 annotated cc pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-3291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-3291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-3291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like cc proteins, having 105 fully defined 106-3291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like cc proteins, of therapeutic potential, and identifying and short-like in the string of the string putative adhesins that are important in drug custor of the string putative adhesins that are important in drug discovery and preventing therapeutics for whooping cough, pneumonia, constructs a suide from a state of string the string habeter is a ball of the string the string the string habeter is a suide from a string the string habeter is a suide from a string the string habeter is a suide from a string the string habeter is a suide string the string habeter is a suide from the string habeter is a
                                                                         distantly related organisms, and from bacteria belonging to a wide phylogenetic spectrum. (M1) is capable of predicting adhesive nature of unique proteins. The present sequence is a microbial pathogen adhesin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            algorithm; adhesin; pharmaceutical; vaccine; drug screening; bordetella pertussis infection; antibacterial; pneumonia; antilnflammatory; respiratory-gen; gastric ulcer; antiluleer; gastrointestinal-gen; urinary tract infection; antimicrobial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              06-FEB-2004; 2004IN-DE000173.

The invention relates to a substantially pure polypeptide comprising an amino acid sequence selected from Rv0284, Rv0285, Rv0365, Rv0569, CC Rv1195, Rv1386, Rv3477, Rv3878, Rv3879c or MT3106.1 (also disclosed are CRV1195, Rv1386, Rv0387c), or their immunogenic portion, nucleic acids encoding them and an amino acid sequence analogue having at least 70% cs sequence identity to the polypeptide and is immunogenic. The protein is cuseful in preparing a pharmaceutical composition for diagnosing ct uberculosis and in preparing a vaccine against tuberculosis caused by virulent mycobacterium, are transpeutically in a subject not infected with a virulent mycobacterium, or therapeutically in a subject not infected with a virulent mycobacterium. The protein is useful for preventing, composition and detecting infections caused by species of tuberculosis compositic assays for detecting caused by species of tuberculosis may be used for effecting in vivo expression of the antigen, and in a sample. The vaccine is an improvement of the living BCG vaccine presently caused into the genome or more polypeptide has been incorporated into the genome of the composition of more than one copy of a nucleotide sequence enhances the immune response. The present sequence represents an M. CC cuberculosis protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁

CC identifying adhesin and adhesin-like proteins, by computing the sequence-
CC based attributes of protein sequences using fire attribute modules of a
CC neural network software, training an artificial neural network (ANN) for
CC each of the computed five attributes, and identifying the adhesin and
CC edual or greater than 0.51. Also claimed is a set of 274 annotated genes
CC equal or greater than 0.51. Also claimed is a set of 274 annotated genes
CC encoding adhesin and adhesin-like proteins, having 274 fully defined 162-
CC 1151 base pair (SEQ ID NO: 385-558) sequences; a set of 105 hypothetical
CC genes encoding adhesin and adhesin-like proteins, having 105 fully
CC defined 306-15876 base pairs (SEQ ID NO: 659-763); a set of 279 annotated
CC adhesin and adhesin-like proteins, having 205 fully defined 53-3716 base
CC pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like
CC 280-384) sequences; and a fully connected multilayer feed forward ANN (I)
CC based on (M1). (M1) is useful for identifying adhesin and adhesin-like
CC proteins, of therappeutic potential, and identifying and short-listing
CC proteins for further testing in development of new vaccine formulations
CC useful for identifying putative adhesins that are important in drug
CC discovery and preventing therapeutics for whooping cough, pneumonia,
CC gastric ulcer and urinary tract infections. (M1) identifies adhesins from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hits satisfying chosen parameters:
